Winter Energy Saving Tips

- Caulk and weather-strip doors and windows that leak air.
- When home, turn down the heat to 68° F or as low as comfortable.
- When you are asleep or away from home, turn thermostat back 10° to 15° for eight hours and save around 10% a year on your heating and cooling bills.
- Consider getting a programmable thermostat.
- Turn down the temperature of your hot water heater to the warm setting.
- Have your oil-fired heating system serviced annually or your gas-fired heating system serviced every three years.
- Clean or replace furnace filters every other month.
- Keep the fireplace flue damper closed unless a fire is burning.
- Check that warm air registers, baseboard heaters and radiators are not blocked by furniture or drapes.
- Close your curtains and shades at night; open them during the day.
